DETAILED ACTION

Allowable Subject Matter

Claims 1-5 are allowed. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art is the Brosinger DE 3642443A reference. The reference discloses the use of a pressure sensor to monitor the filter pressure, and a control that controls the flow rate through the filter. The control operates a flap that opens a bypass passage allowing air to bypass the filter. The prior art does not disclose a filter pressure loss measuring device flow rate regulating means for regulating the flow rate so as to maintain a constant level, the flow rate regulating means having a tributary path which is branched from the flow path (mainstream path) and communicates with the outside, and one or more flow path opening/closing members capable of, in conjunction with the level of the fluid flow rate as measured through the flow rate measuring means, opening or closing the mainstream path or the tributary path such that the flow path opening ratio of each of the paths varies continuously or intermittently, whereby the pressure loss is measured while the flow rate of the fluid which passes through the filter is maintained at a constant level by the flow rate regulating means.
